PROFILE

IT support technician and on-shift **site IT point of contact** at LGO5, a 24/7 high-volume distribution centre operated by GXO Logistics. Hands-on with Windows 10/11, Active Directory and Entra ID, switching and VLANs, NAC (802.1X/MAB), handheld fleets under MDM and RFID/scanning systems. I build internal web tools (Netlify, Retool) to remove manual work. Outside work I design and operate **Bastion**: Proxmox VE (LXC/KVM), Tailscale subnet routing with **zero open ports**, Pi-hole DNS, Docker Compose services behind Nginx Proxy Manager, layered monitoring and alerting, **tested 3-2-1 backups** and an n8n + Gemini read-only operations agent, with **25 incidents documented** as symptom → diagnosis → root cause → fix → lesson. **Goal: a cloud-focused career** in hybrid infrastructure, automation and security.

PROFESSIONAL EXPERIENCE

IT Support Technician – Deskside & Field Support · On-shift Site IT Point of Contact

May 2026 – Present

GXO Logistics Spain · LGO5 Distribution Centre (international fashion retailer), Ontígola (Toledo)

INFRASTRUCTURE & NETWORK

- Switch ports and VLANs, DHCP/DNS, LAN/Wi-Fi and access point troubleshooting with the corporate network team.
- Network access control (NAC/802.1X, MAB): MAC registration and authentication troubleshooting, including VLAN mismatches.
- Operation-critical stations (time clocks, shop-floor terminals) over F5 VPN; PLC and pick-to-light sorter communications diagnosis with the manufacturer.
- CCTV on Genetec Security Center: camera onboarding, users and permissions.

USERS, ENDPOINTS & VENDORS

- Onsite first-level support for office and shop-floor users: hardware, Windows, Microsoft 365 and business applications.
- Workstation imaging and deployment; Active Directory and Microsoft Entra ID accounts, groups and permissions; handheld fleet (Zebra, Bluebird) under MDM.
- Asset inventory and lifecycle, printer fleet (Zebra, Ricoh), vendor cases, warranty and RMA through to closure.

PROJECTS & DEVELOPMENT

- **IT ticketing application (Netlify):** designed, built and deployed a web tool for the site IT team to log, assign, prioritise and track incidents and requests, with a single view of open work and full history.
- **Equipment assignment app (Retool):** self-service kiosk where operators scan their badge and the machine to assign it per shift, with pre-use check, history and traceability. Prototyped in Power Apps, rebuilt in Retool.
- **Shop-floor scanning & RFID:** integrated ProGlove MARK Display wearable scanners (Bluetooth HID) and configured Impinj R700 RFID readers on production lines; wrote the team's procedure manual.

Administrative & IT Services Assistant

6 months

Apleona Iberia · Onsite service at IBM offices, Madrid

- Corporate email management for the office: shared mailboxes, requests and follow-up.
- Microsoft services administration: Microsoft 365 users, licences and service requests.
- IT purchasing: equipment and service orders, supplier quotes, and invoicing and reconciliation of IT spend.
- Built Excel tools (log, traffic-light inventory, dashboard) to improve daily operations, under a multinational's security and confidentiality standards.

BASTION — SELF-HOSTED INFRASTRUCTURE & SECURITY LAB

Production-style platform on a physical Proxmox host, documented end to end. Architecture, runbooks and the 25 incident reports: martindeprada.dev

- **Virtualisation:** Proxmox VE 9.2 (UEFI, ext4), unprivileged LXC containers and KVM VMs (VirtIO SCSI, ballooning, QEMU Guest Agent), autostart on every guest, split admin accounts with TOTP 2FA. Hardware validated with Memtest86+ and SMART before use.
- **Zero-exposure access:** Tailscale subnet router for the LAN (persistent IP forwarding via sysctl), tailnet DNS pointing to Pi-hole, *accept-dns=false* on the host to avoid a circular DNS dependency. No ports open on the router.
- **DNS:** Pi-hole v6 in an unprivileged LXC with ~303,000 blocked domains (StevenBlack + Hagezi Pro) and local names resolved through Nginx Proxy Manager.
- **Monitoring & alerting:** Uptime Kuma (10 monitors), Glances API on the host, an external heartbeat every 5 min to Healthchecks.io, Proxmox notifications through a webhook to ntfy. Every alert path tested with a real failure.
- **Backups:** daily 03:30 snapshot-mode jobs (ZSTD) for every guest; restore tested on a VM with a database, restored isolated and verified by comparing table counts; encrypted offsite copy with rclone completing the 3-2-1 rule.
- **Docker platform:** hardened Debian 13 VM (key-only Ed25519 SSH, no root login, verified with *sshd -T*); one Compose project per service under */opt*, secrets in *.env* (600), pinned database versions with no published ports, a snapshot per milestone. Runs Nginx Proxy Manager, Homepage (no Docker socket mounted) and n8n.
- **AI operations:** n8n + Gemini API weekly health report built from the Uptime Kuma API, Glances and Proxmox with a read-only token (its first run caught a backup job that reported success while saving 1 of 3 guests), plus a chat agent with tool calling that is read-only by design.
- **Method:** inventory as the single source of truth; incident log in a fixed format and four diagnostic rules: read the literal output, walk the network ladder (IP → gateway → internet by IP → DNS), verify effective rather than written config, trust logs over functional tests.
- **Earlier labs (Hyper-V):** Ubuntu Server hardening (netplan, key-only SSH, UFW, cron rotation) and Windows Server with Active Directory (OUs, AGDLP, GPO).

TECHNICAL SKILLS

Systems
Windows 10/11, Windows Server, Active Directory, Entra ID, GPO, Microsoft 365

Networking & security
TCP/IP, VLANs, DHCP/DNS, Wi-Fi, NAC/802.1X, VPN (F5, Tailscale/WireGuard), SSH hardening, UFW, Pi-hole

Automation & development
n8n, Gemini API, PowerShell, Bash, JavaScript, Retool, Netlify, Git/GitHub

Linux & virtualisation
Debian, Ubuntu Server, Proxmox VE (KVM/LXC), Hyper-V, Docker Compose, systemd

Monitoring & backup
Uptime Kuma, Healthchecks.io, Glances, ntfy, Proxmox vzdump, rclone

Devices & site systems
Zebra, Bluebird, ProGlove, Impinj RFID, MDM, Genetec Security Center

EDUCATION & CERTIFICATIONS

Higher Technician Diploma in Network Systems Administration (ASIR)
Universae · In progress

Cisco CCNA (200-301)
In preparation

Advanced Microsoft Excel
Complementary training

LANGUAGES

Spanish
Native

English
Intermediate · daily use with technical documentation and vendors
